Decora World 3D

Product Features / Components

- Decora Natur Collection products are manufactured from the following resources:
 - Backing material: 85 gr./m² non-woven (certified according to FSC)
 - Lamination: 133 gr / m² textile warp-yarns made from high quality viscose
 - Coating: 7 – 17 gr./m² PU-Plastisol (all components are REACH compliant)
 - Acrylate-binder
 - Acetate-binder
 - Water
 - Additives
 - CaCO₃
 - Titanium White
- Decora Natur non-woven wallcoverings do not need soaking time and should only be hung using paste-the-wall technique or with a pasting machine.
- Decora Natur non-woven wallcoverings can be completely dry stripped if the surface has been suitably prepared.
- Decora Natur non-woven wallcoverings are:
 - Skin-friendly, because they do not contain glass fibres
 - Dimensionally stable - therefore no soaking time required
 - Tear-bridging ability
 - Impermeable to steam
 - Free of PVC, plasticizers and solvents
 - Fire-retardant (Fire Protection Classification B1) - Can be used in the commercial sector
- For textile wallcoverings, individual strips can be visible. This is a design element as well as the quality seal of the product.

Technical Data

- Dimensions: 10,05 m x 0,53m (Euro-roll); possible dimensional variations of + / - 3%
- Weight: approx. 230 g / m²
- Roll diameter: approx. 10 cm
- Hanging at 18°C and a relative humidity of 65% is ideal
- Drying time: 1-2 days, depending on the temperature, relative humidity and the base surface.
- Impermeable to steam according to DIN 53122 and DIN 52615
- In combination with mineral surfaces and non-combustible building panels it is flame-retardant according to DIN 4102-B1. Test Certificate Number: P-MPA-E-02-585
- Rolls must be stored vertically in a dry, cool place
- Owing to batch production of wallcoverings, only one fabrication can be processed in each area
